

I Wonder Reflection

interesting opening statement
Well done!

There are plenty of skills to make a presentation good, but here are 5 really good ones: One is eye contact. If you don't make eye contact then you just read from the paper, which is kind of boring. A loud voice so everyone can hear. A good pace so you don't stutter or talk too fast. Know a lot about your topic so your presentation is not just 1 minute. Like the topic you are doing so you don't sound miserable when you are presenting.

I personally think I did ok on my presentation. I had pretty good eye contact, a loud enough voice so everyone could hear, a good pace, I knew quite a lot about my topic, and I liked my topic. The only thing I need to work on is being more enthusiastic. Because my classmates say that I just sounded kind of not happy. Honestly, I liked my topic, I guess I just don't have a very enthusiastic voice. I will for sure do all the things I listed, and I will try to be enthusiastic.

Way to go Jordan
Excellent reflective comment

I learned so much throughout everyone's presentations. Like why mosquito bites itch. I thought it was just because they do, but we actually have an allergic reaction from the mosquito's saliva, which makes the bite a bump, and makes it itch. I learned probably like 40 things, but the most interesting one was why the sky is blue. It is blue because of the light from the sun scatters around in the sky, and the colour that shows is blue. Then when the sky is red, like in the evening at sunset, it's the same thing. The light from the sun scatters and it makes the colour red. Some people also had really good ideas such as cue cards, power points, and diagrams.

On my next presentation, I want my presentation to be the best out of the class. So I will work really hard and memorize my speech so I barely have to look down. I will be enthusiastic and I will do and try my best!

I am really looking forward to your next presentation Jordan. Keep up the great work!

offer presenting
a list

I Wonder Reflection

Five important skills needed for presentations are as follows. Eye contact, pacing, loud and clear voice, posture, and look confident.

good points

I especially liked it when students explained their topic through diagrams and pictures. It made it easier to understand what they were trying to say. I liked it when the research answers were fully answered, and completely converted to the audience and for the audience to better understand. I also liked it when the presenter looked confident about his or her answers. It made the presenter look like he or she really knew what he or she was talking about.

Very strong paragraph
Great idea to make a point and then back it up.

For my next presentation I need to work on my eye contact. I will begin to do this better by memorizing my lines so I can look up more often. I will also work on making my answers clearer and gathering extra information in case I am asked a question that I did not know of the top of my head. I also need to talk to the audience instead of telling them about my topic, I will actually try to teach them.

Well done!
I am looking forward to your next presentation

Some important points I learned were... only female mosquitoes bite, parrots don't have vocal cords, horses only sleep for 3 hours a day, male pattern baldness is genetic for both male and female, and aero chocolate bars are made by blowing air while it dries.

Very impressive writing style Shelby.
Way to go!

My I wonder... Personal Assessment

Important presentation skills are:

- Talk at a normal pace
- **Practice**
- Know and enjoy your topic
- Bring in/use a visual
- Have eye contact (with the audience not the wall or your script)
- Be Prepared
- Make connections & analogies
- Know extra facts on your topic
- Use words in your vocabulary
- Explain 'big' words
- Say "HI!"
- Talk, DON'T read
- DON'T mumble or stutter
- DON'T lose your script

We agree Juliana!

I feel that I did exceptionally well on my presentation (I):

- Had eye contact
- Used a visual (multimedia: video from YouTube) that I explained ✓
- Answered every question
- Spoke clearly and loudly
- Had Fun

Way to go! It is surprising how important this is to learning!

For my next presentation I will do the following to improve my presentation (:):

- Talk at a regular pace (a little slower)
- Talk to a knowledgeable person in that field ✓
- Make or bring something in.
- Have a large poster and pictures
- Use someone from the audience as a volunteer

great idea

I really look forward to your next presentation

Presentation elements that stand out (:):

- A large poster – Sierra – Shark Finning
- Use of multimedia – Me (Juliana) – video – ozone layer depletion
- Brought in a visual – Trevor – a skate
- As, partners, they scripted together a conversation – Amanda & Helen – Yawning

good use of specific examples

Things that I learned:

- By 2063, we could be dead. – Juliana P. Ozone layer depletion
- Save the Sharks. Save the Ocean. – Sierra M. Shark Finning
- No one knows why yawning is contagious. Amanda A. & Helen L. Yawning
- Snakes that don't shed all their skin can grow ill from parasites on the old skin. Alex J.
Why Snakes shed their skin
- Skate blades are glued to the boot. – Trevor How are skates made'
- The first computer wasn't electronic. – Tasfia A. Who made the first computer
- Use your visuals
- Remember to speak to the class, not read ✓
- Choose something you're interested in, you'll do a better job that way
- Involve the audience
- Make sure we know that you're done

Very impressive Juliana!
You seem to have discovered and developed
an excellent recipe for success as a student!

- listen carefully
- strive to do your best
- have fun learning.

I hope that I can help you and
all students to further develop these
important life skills.

Keep up the wonderful effort!
Great use of lists. Next time you might
want to complete your reflection with
more. (Just so you continue
with all of your
skills)

I Wonder Reflection

The I wonder Presentations were really neat and here are some reflections ^{that} I have. Five things that are important when doing a presentation are eye contact, speaking loud, knowing what you're talking about, making your topic interesting, speak slow and clear, and have good solid facts to back up your topic. I liked how in Mac's presentation he had power point. Quite a few people also had power points and they make the presentation much more interesting. It was cool in Hygiens presentation when she drew out the pictures of how avalanches happen. It was very helpful when Austin showed us a video about the car engine. Next time I really should make a power point or at least bring in a artifact or picture. My presentation was a bit boring since I didn't have anything to show the class. I did think I did a god job on some stuff. I got some good solid facts in my presentation and I made a pretty cool poster. There's still some stuff I would like to make better. Five things I could have done better is make it more interesting, explain my topic better, use cue cards, bring a artifact or a diagram, and speak louder. I learned from Sarahs presentation that using pictures of yourself in a PowerPoint looks cool. I wonder presentations were awesome and I had lots of fun.

Consider using a colon (!) before a list

Great use of specific examples.

I don't think so - We really enjoyed your presentation

New paragraph

These are great reflective comments

Graham. Way to go!

Paragraphs would have made this assignment even better. I would like to use this as an example if you have it in mind.
